

java::util::Comparator< Entity >

```
classDiagram
    class Base["java::util::Comparator< Entity >"]
    class Sub["jdungeon.frontend.EntityComparator"]
    Sub --|> Base
```

The diagram shows a class hierarchy. The base class, 'java::util::Comparator< Entity >', is represented by a white box with a thin black border and is divided into three horizontal sections. The top section contains the class name, while the middle and bottom sections are empty. The subclass, 'jdungeon.frontend.EntityComparator', is represented by a grey box with a thick black border and is also divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section contains the method signature '+ compare()'. A blue arrow with an open triangular head points from the top center of the subclass box to the bottom center of the base class box, indicating an inheritance relationship.

jdungeon.frontend.EntityComparator

+ compare()
